

CO₂ Performance Ladder policy statement cf V4.0 – Step 1

Responsible business is in our DNA – especially in these times when socially conscious action is more important than ever. Every day we carry out the necessary works to keep our rail network (train, tram, metro) in top condition. In the context of the current social climate, we recognise that we must take on this responsibility more broadly, within the possibilities and limitations of the rail sector.

As a contractor, we regard the CO₂ Performance Ladder as an important sustainability instrument for identifying and reducing our CO₂ emissions. In 2025, Taveirne obtained the CO₂-Aware Certificate level 3 (according to Handbook 3.1), which took concrete steps towards further reducing our emissions. With the acquisition of Spoorwerken Peeters / Vanormelingen-Stas in 2026, Taveirne is further expanding its expertise and strength. At the same time, the CO₂ emissions of these activities were also brought within the scope of the energy and CO₂ management system. In addition, our ambition was reinforced by switching to Handbook 4.0 – Step 1.

First and foremost, our objective is to do business CO₂-consciously by taking stock of and analysing our emissions. Based on the insights gained, our objective of CO₂-conscious business evolves into CO₂-reducing business. By deploying the CO₂ Performance Ladder as a sustainability instrument, we want to emphasise our progressiveness and take responsibility for reducing our ecological

footprint to a minimum.

To achieve our objectives, we will implement an active energy and CO₂ management system that is integrated into our current VCA** and ISO 9001 management system. Keeping business continuity in mind, we strive for continuous improvement of the energy efficiency of our processes by:

Monitoring, measuring and verifying our energy that generates CO₂ emissions.

Evaluating and adapting the proposed reduction measures.

Complying with legal requirements on energy saving, sustainable energy and CO₂ reduction

Providing the necessary resources needed to implement the proposed reduction measures

Raising awareness among our internal and external stakeholders and making them energy-conscious.

Actively participating in initiatives aimed at reducing CO₂ emissions and promoting sustainability within the rail sector.

Reporting and communicating periodically and transparently, internally and externally, about our efforts to reduce our CO₂ emissions.

Achieving continuous improvement of our energy and CO₂ management system.

With this policy statement, we, the management, endorse our commitment to proactively reduce our CO₂ emissions and to contribute to the global sustainability of our environment.

The Management,

Managing Director
